Cardiopatias na População Pediátrica

A morte súbita cardíaca representa 19% das MS em crianças entre 1 e 13 anos.

Tratamento

Intervenção anti-adrenérgica **(LQT1 e 2)**

- Beta-bloqueador (propranolol , nadolol, atenolol)
- Simpatectomia

Bloqueadores de canais de sódio **(LQT3)**

- Mexiletine e flecainide

Síndrome QT curto

Autossômico dominante com baixo grau de penetrância

Predominio do sexo masculino

30% dos paciente podem apresentar FA

Morte súbita por Taquicardia Ventricular Polimórfica.

y Journal 2013, Vol. 20, No. 5, pp. 464–471

Recommendations	Class[a]	Level[b]	Ref.[c]
QTS is diagnosed in the presence of a QTc ≤340 ms.	I	C	This panel of experts
QTS should be considered in the resence of a QTc ≤360 ms and one or nore of the following: a) A confirmed pathogenic mutation b) A family history of SQTS c) A family history of sudden death at age <40 years d) Survival from a VT/VF episode in the absence of heart disease.	IIa	C	This panel of experts

Síndrome QT curto

Pico de incidência de PCR no primeiro ano de vida (4%).

Apresentam 1,3% de risco de MSC entre 20 e 4 anos de idade.

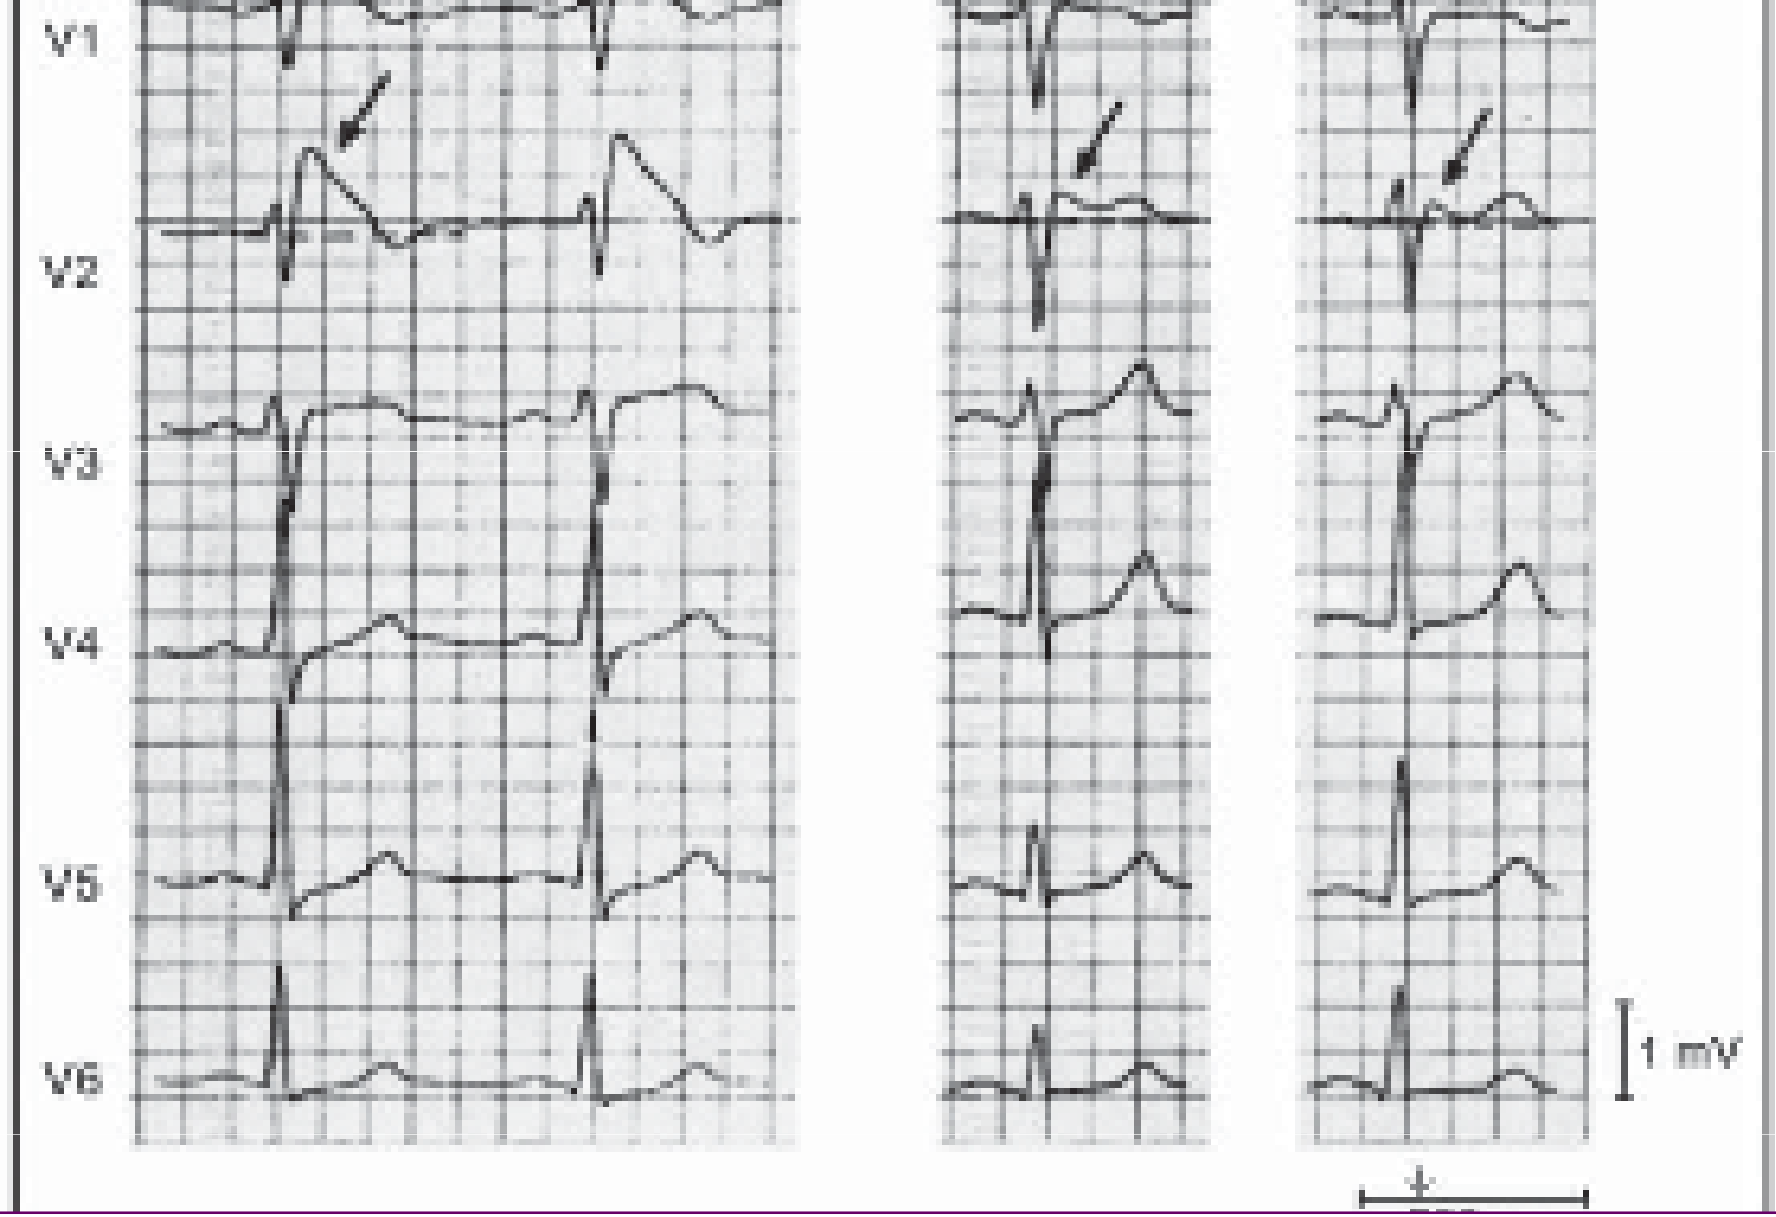
Síndrome QT curto

TRATAMENTO:

- FARMACOLÓGICO X CDI

Síndrome de Brugada

- Autossômica dominante
- Mutação do Gene SCN5A
- A mutação neste gene esta presente em 20-30% dos casos



agnostic Criteria for Brugada Syndrome (From 1st Consensus Document) ST-Segment Abnormalities in Leads V1-V

	Type 1	Type 2	Type 3
oint	≥2 mm	≥2 mm	≥2 mm
ave	Negative	Positive or biphasic	Positive

Recommendations	Class[a]	Level[b]	Ref.[c]
Brugada syndrome is diagnosed in patients with ST-segment elevation with type 1 morphology $\geq$2 mm in one or more leads among the right precordial leads V1 and/or V2 positioned in the second, third, or fourth intercostal space, occurring either spontaneously or after provocative drug test with intravenous administration of sodium channel blockers (such as ajmaline, flecainide, procainamide or pilsicainide).	I	C	This panel of experts

Síndrome de Brugada

Prevalência de 0,0098% na população pediátrica

Prevalencia de sexo ?

77% dos doentes a PCR é a primeira manifestação d
doença.

13% dos pacientes podem apresentar FA ou Flutter

Síndrome de Brugada

Tratamento:

* CDI
* Antiarrítmicos:

Potential antiarrhythmic drugs in Brugada syndrome p

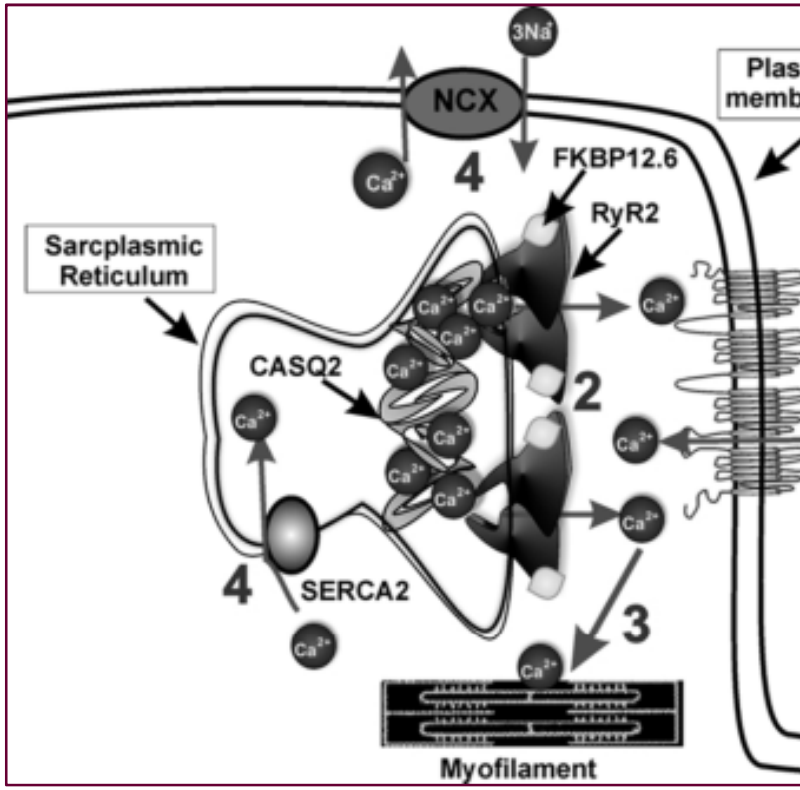
Drug category	Drug (generic)	Recommend
Antiarrhythmic drugs	Isoproterenol / Isoprenaline[15,17,113,114]*	Class I
	Orciprenaline[115]	Class IIa
	Quinidine[8-10,15,116,117]†	Class I

Taquicardia Ventricular Polimórfica Catecolaminérgica

40% dos casos tem história familiar de MS

Principais mutações são nos genes:

- RyR2 (60%) - autossômica dominante
- CASQ2 (5%) - autossômica recessiva



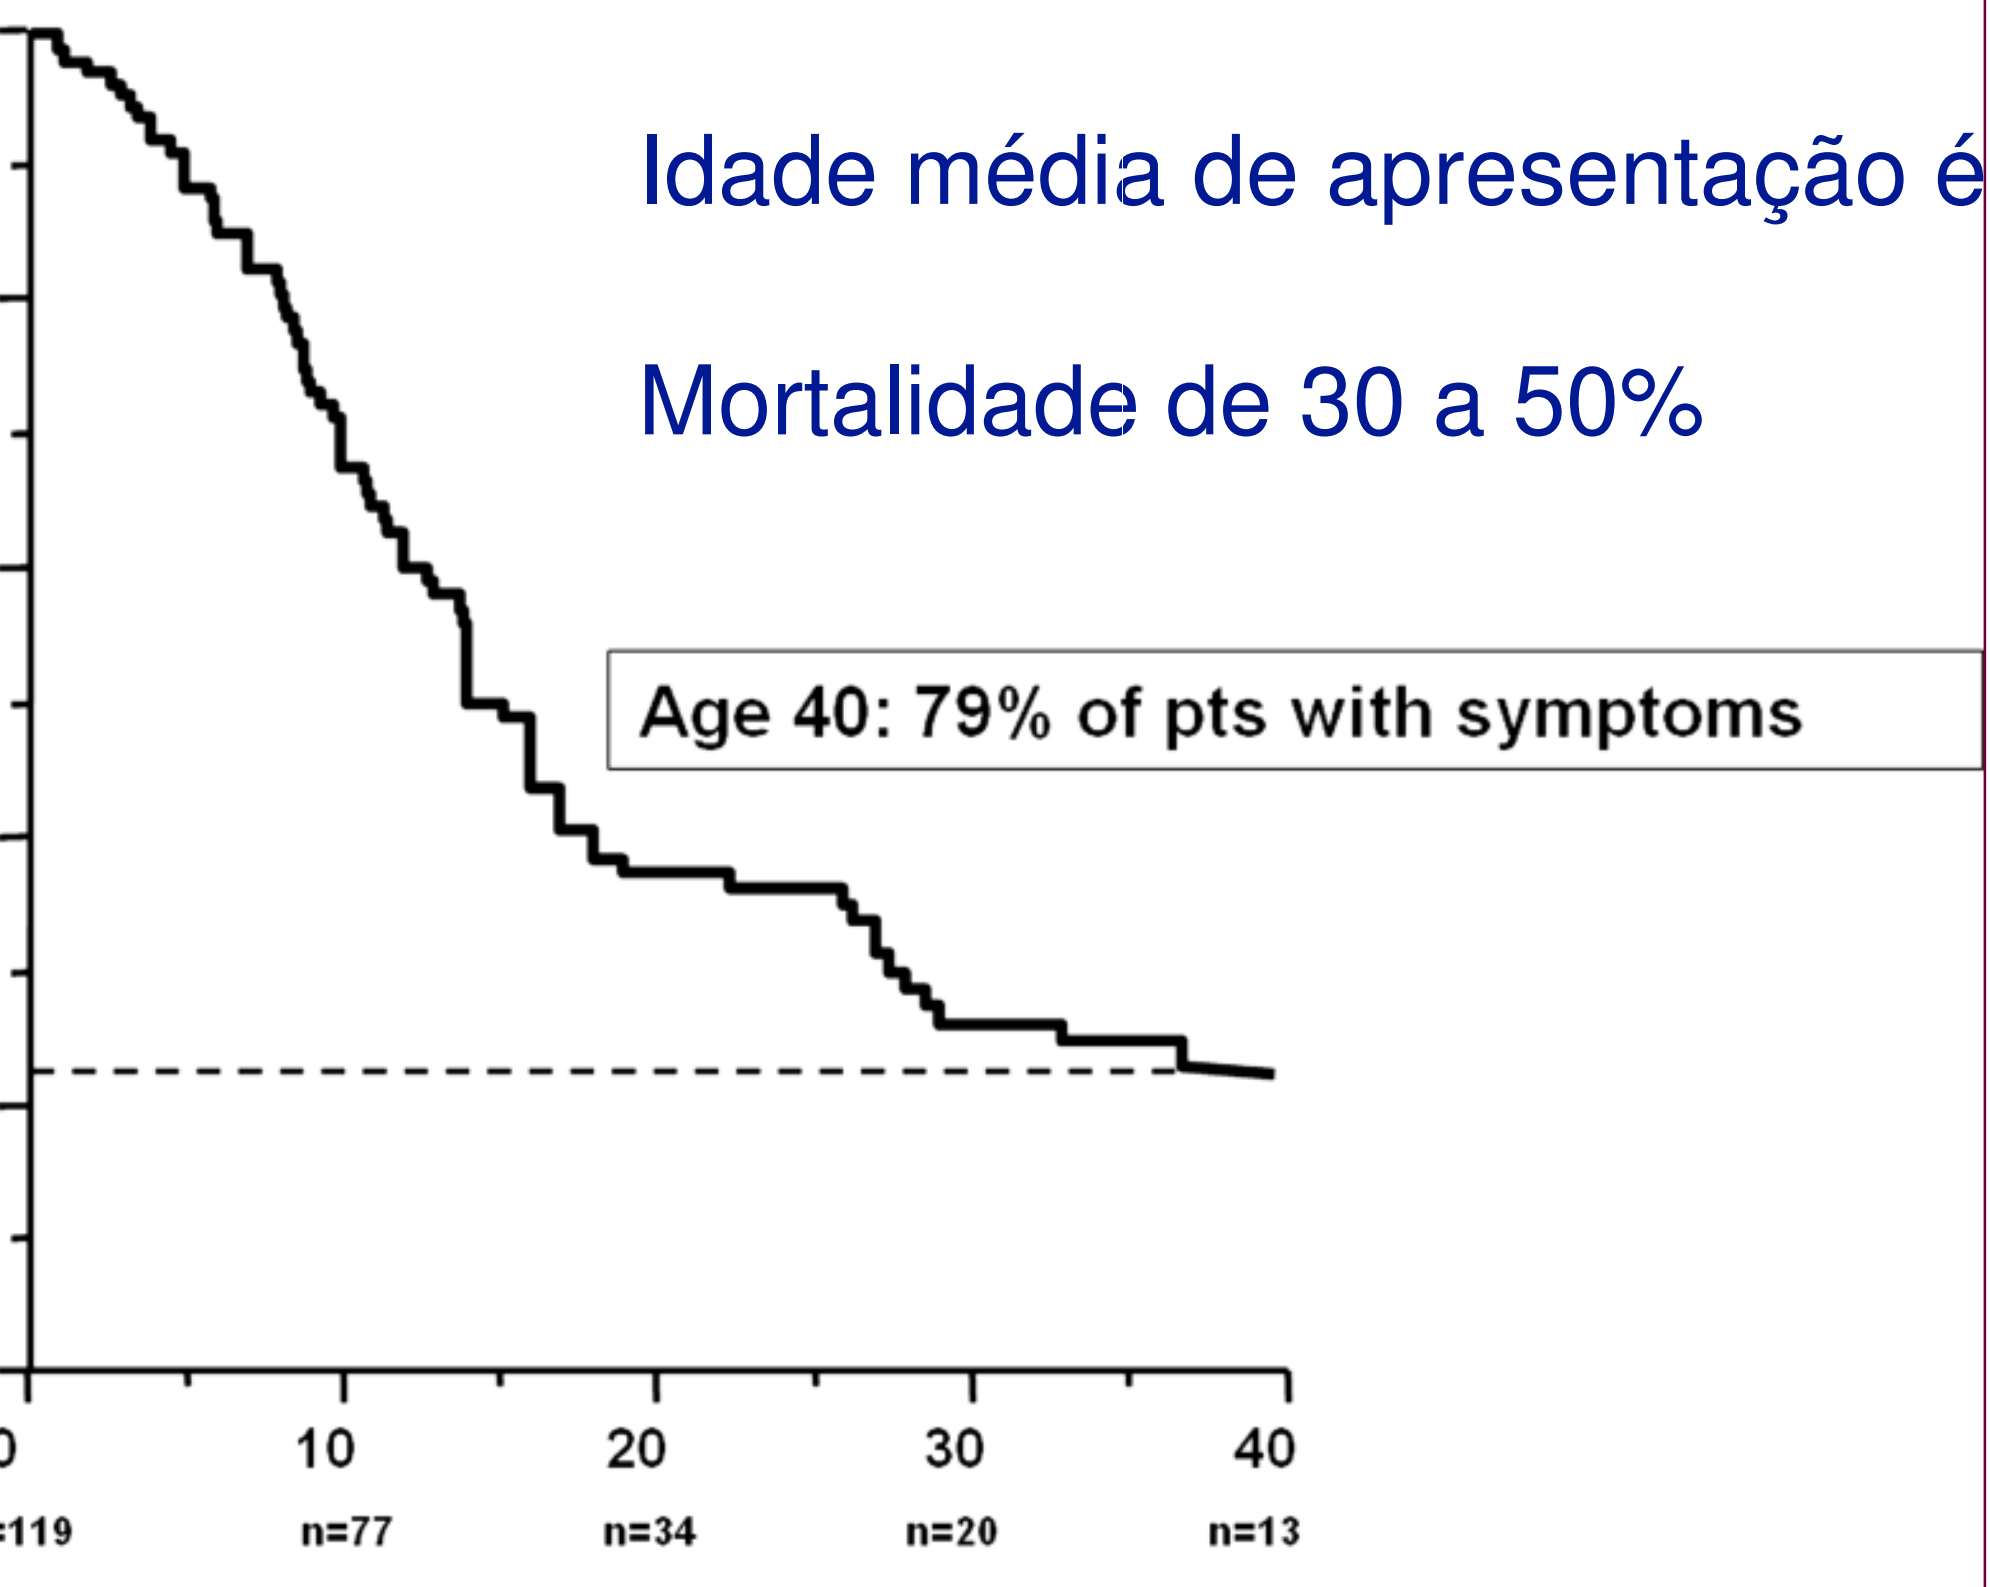
O teste genético é capaz de identificar os familiares assintomáticos porém a ausência de de mutações não exclui o diagnóstico.

Taquicardia Ventricular Polimórfica Catecolaminérgic

- Episódios sincopais são desencadeados pelo exercício físico ou estresse psicológico.
- O teste ergométrico pode induz TVP em 80%

Idade média de apresentação é **8 anc**

Mortalidade de 30 a 50%



Diagnosis of catecholaminergic polymorphic ventricular tachycardia

Recommendations	Class[a]	Level[b]	Ref.[c]
CPVT is diagnosed in the presence of a structurally normal heart, normal ECG and exercise- or emotion-induced bidirectional or polymorphic VT.	I	C	14,52, 457
CPVT is diagnosed in patients who are carriers of a pathogenic mutation(s) in the genes *RyR2* or *CASQ2*.	I	C	14,52

udden cardiac death: catecholaminergic polymorphic ventricular achycardia

	Recommendation
Primary prevention	
Beta-blockers	Class IIa
Implantable cardioverter defibrillator (ICD)	Class IIb
Secondary prevention	
ICD (plus beta-blockers)	Class I
Beta-blockers	Class IIa

Classification

Class I: Conditions for which there is evidence and/or general agreement that a given procedure or treatment is useful and effective.

Class II: Conditions for which there is conflicting evidence and/or a divergence of opinion about the usefulness/efficacy of a procedure or treatment.

Class IIa: Weight of evidence/opinion is in favor of usefulness/efficacy.

Class IIb: Usefulness/efficacy less well established by evidence/opinion.

Class III: Conditions for which there is evidence and/or general agreement that the
